

Smart Industrial Connectivity: Electrification, automation, digitalization, electrical connection technology, electromobility, and renewable energies are the markets where Weidmüller excels.

As experienced specialists, we offer customers and partners worldwide products, solutions and services in the industrial environment of energy, signals and data. We are shaping the technological challenges of tomorrow and are constantly developing innovative, sustainable and useful solutions for the individual needs of our customers. Together, we set the standards in the field of industrial connectivity.

Your Role as Cloud Platform Architect

Join a team of three who jointly own a cloud-native platform built on Azure and AKS/Kubernetes. The platform enables development teams to deploy, run, connect, and integrate their services and microservices reliably and independently. You won't just build infrastructure — you'll shape it as a product, care for the teams who rely on it, and evolve it continuously. European business hours, real ownership.

Key Responsibilities

Own & Evolve the Platform

- Co-own the full lifecycle of the platform: Azure infrastructure, AKS runtime environments, networking, security baselines, monitoring, container registries, and deployment standards (incl. Helm charts)
- Operate and improve core-adjacent services such as database servers, Azure Storage, and centralized shared services

Maintain and prioritize a shared backlog — balancing reliability, security, cost efficiency, and sustainable evolution

Enable Teams to Deliver

- Provide the technical foundation that allows development teams to deploy, operate, connect, and integrate their services across the platform with confidence
- Translate business and technical needs into platform capabilities, sensible defaults, and self-service building blocks
- Reduce operational friction — make the right thing the easy thing

Care for Quality & Continuous Improvement

- Enforce governance and security through admission policies (e.g., Bridgekeeper/Gatekeeper), network segmentation, IAM, and access controls
- Run incident management for core infrastructure and learn from it systematically

- Proactively manage cloud costs and drive observability, automation, and lifecycle management

Your Profile

- Successfully completed studies in computer science or a comparable field;
- Excellent knowledge of state-of-the-art IT security solutions;
- 5+ years building and operating cloud-native production platforms;
- Very good English skills, German is a plus.

What we offer

- Professional development: you will be part of an international team committed to support you to learn new skills and shape a career path that fits you, with access to various learning platforms;
- Onboarding & Integration: we ensure a smooth and efficient integration through a structured onboarding program, complemented by the ongoing support of a collaborative team;
- We prioritize your well-being: therefore we're granting access to high-quality healthcare services through our comprehensive private medical insurance;
- Meal tickets: we support your everyday routine with meal tickets to make your workdays a little easier and more enjoyable;
- Gifts for Special Occasions: Easter Holidays, Winter Holidays, 8th of March for our ladies colleagues;
- Flexibility: we support a healthy work-life balance by offering flexible arrangements tailored to your role and responsibilities;
- Bonuses: performance bonuses as a reward of your achievements and referral bonuses as a thank you for helping our team growth.
