

Release Notes u-netops

Attention: To ensure full feature availability, use the latest switch firmware released in 2026.

Version 1.0.4

Release Date: October 09, 2026

Feature Enhancements / Updates:

- Added an option to display either device IP addresses or system names in the topology view.
- Added NTP client support.
- Added syslog server support.
- Added automated switch configuration backups and comparisons.
- Extended the Traffic Monitor to display unicast, broadcast, and multicast traffic.
- Added configurable thresholds and alert levels for unicast, broadcast, and multicast traffic.
- Enhanced the topology view to display multiple links between two devices.
- Added configurable severity levels for u-netops events.
- Added SMTP email notifications when configured event thresholds are exceeded.
- Added Neighbor Details.
- Added a MIB Browser.
- Added an SNMP Test feature.
- Added Location Alerts.
- Added customizable background colors for switches.
- Added a Notes feature.
- Replaced Telnet with SSH for remote management.

Bug Fixes:

- Fixed an issue that caused an additional port to appear in Port Status and Traffic Monitor.
- Fixed abnormal behavior when performing SET operations in the MIB Browser.
- Fixed an issue that caused fields containing identical data to be overwritten in the MIB Browser.
- Fixed errors that occurred when deleting MIB files.
- Fixed an issue where OID fields were too short to display complete OID strings.
- Fixed incomplete neighbor information displayed for switches.

Version 1.0.3
