

OMNIMATE POWER Connector Series SV / BVZ 7.62HP **Rework of the pluggable shielding plate**

Initial situation:

As part of our ongoing product maintenance and improvement we are going to optimize the pluggable shielding plate of our product family SV / BVZ 7.62HP.

Technical change:

We are going to extend the terminal lugs of the shielding plate with a different shape. These changes make it easier to wire up the cable, while optimizing the cable guide and the contact surface of the pluggable shielding plate. Furthermore, the thickness is reduced to 1mm. Cutouts required for the contacting the shielding plate to the housing will not be affected by the change. The optimized shielding plate will be done for all directions (150°, 180° and 210°).

Please refer to the drawings in the appendix.

Result / Availability:

We plan to start the production of the optimized pluggable shielding plate in Q1/ 2017.

To ensure a smooth change over to existing customer, the conversion will be done gradually without changing any article numbers! Thus, during the conversion period it may lead to a mixed delivery of orders to individual customers, but never mixed in one packaging unit. An inventory cleaning is not planned so far.

Best regards
