

## Hardware Installation Guide

### Unmanaged Gigabit Ethernet PoE Switches

#### IE-SW-EL10-8GTPoE-2GESFP (Part No. 2682410000)

## 1. Introduction

Ethernet Switches from Weidmüller are designed with a very compact housing size and are fitted with a robust housing. To ensure reliable, error-free operation, and to prevent damage or injury, please read the operating instructions, all safety information provided in this document and any other safety information that were supplied with the product.

## 2. Safety notice

|  |   |
|--|---|
|    | Switch off the electrical power before removing the power connection!   |
|    | The device heats up during operation. Allow the unit to cool down or use protection gloves when carrying out any work.  |
|    | The device may only be connected to the supply voltage shown on the product label. Higher voltage than specified will destroy the device. The device must be supplied by a SELV source as defined in the Low Voltage Directive 2014/35/EU and 2014/30/EU.   |
|    | Installation, commissioning and maintenance may only be performed by qualified electricians.  |
|    | Observe the operating instructions.   |
|  | <ul style="list-style-type: none"> <li>Indoor use and pollution degree II, it must be wiped with a dry cloth for clean up the device and label.</li> <li>Utilisation en intérieur et degré de pollution II, il faut l'essuyer avec un chiffon sec pour nettoyer l'appareil et son étiquette.</li> <li>Do not block air ventilation holes.</li> <li>Ne bouchez pas les orifices de ventilation.</li> <li>If the equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.</li> <li>Si l'appareil est utilisé d'une manière non spécifiée par le fabricant, la protection qu'il apporte peut se voir diminuée.</li> <li>Shall be mounted in the Industrial Control Panel and ambient temperature is not exceed 75 degrees C.</li> <li>Doit être monté dans le panneau de commande industriel et la température ambiante ne doit pas dépasser 75 degrés C.</li> </ul> |

### Intended use

The device is intended for the realization of communication networks within an industrial environment, it is intended to be used in a restricted access location. The device may only be used within the scope of the specified technical data. The device is intended to be mounted to a well-grounded mounting surface, such as a metal panel. Any other use may result in unintentional malfunction and damage. Observing the documentation is part of the intended use.

### Environmental conditions

This equipment is intended to be used in a restricted access location. When planning the installation site make sure that the ambient temperature during operation will not exceed the temperature given in the technical data. Also make sure that the air flow will not be compromised by other devices. Ensure that the mounted and wired device is not exposed to any mechanical stress.

### FCC compliance

This device complies with part 15 of FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

## 3. Package Checklist

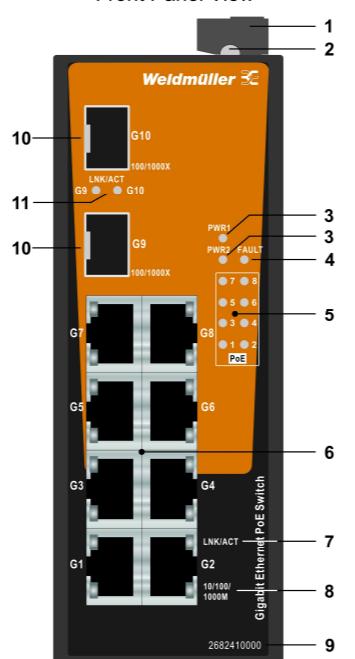

Your Ethernet Switch is shipped with the following items:

- Ethernet Switch
- Hardware Installation Guide (printed)
- 6-Pin Terminal connector
- Protective caps for RJ45 ports

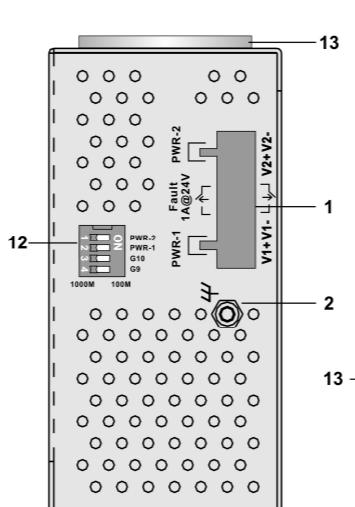

## 4. Panel Layouts

IE-SW-EL10-8GTPoE-2GESFP

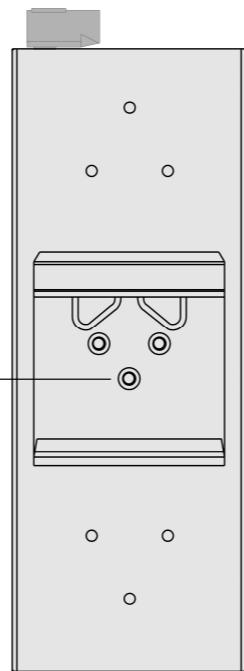

Front Panel View

Top Panel View

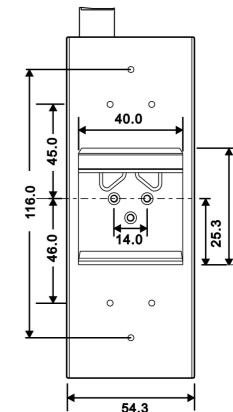

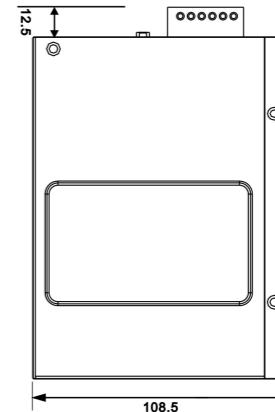

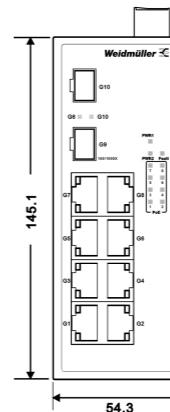

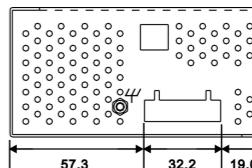

Rear Panel View

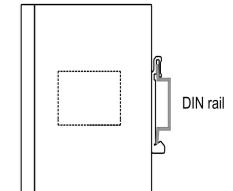

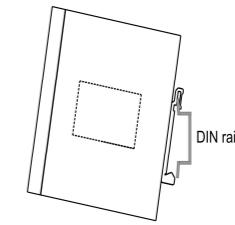

## 5. Mounting Dimensions

(units = mm)

## 6. DIN-Rail Mounting

Slide the switch onto a DIN-rail and make sure that the switch's Din-rail clip clicks into the rail firmly.

**STEP 1:** Insert the top of the DIN-Rail into the slot just below the stiff metal spring.

**STEP 2:** The DIN-Rail attachment unit will snap into place as shown below.

To remove the DIN-rail from the Ethernet Switch, simply reverse Steps 1 and 2.

## 7. Grounding Ethernet Switch

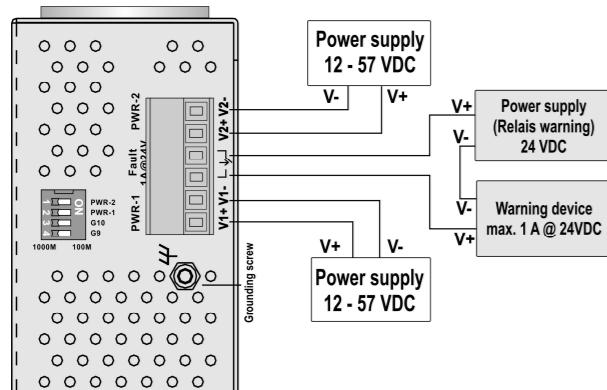

### ATTENTION

- Grounding and wire routing help limit the effects of noise due to electromagnetic interference (EMI).
- the ground connection from the ground screw to the grounding surface prior to connecting devices.
- This product is intended to be mounted to a well-grounded mounting surface, such as a metal panel.
- The shielding ground of the RJ45 ports are electrically connected to the ground connection (screw).

## 8. Wiring Redundant Power Inputs and Power Fault Relay

The switch supports redundant power supplies and provides a power fault relay which can be used for alarming in case of interruption of Power 1 or Power 2. For wiring via 6-pin terminal connector please refer to below illustration.

| Warning / Avertissement  |  |
|--|--|
| <ul style="list-style-type: none"> <li>Take into consideration the following guidelines before wiring the device</li> <li>Tenez compte des directives suivantes avant de câbler l'appareil.</li> <li>Terminal block is mating with Plug and suitable for 12-24AWG. Torque value 4.5 lb-in.</li> <li>Le bornier est compatible avec les connecteurs et convient pour 12-24AWG. Valeur de couple 4,5 lb-in.</li> <li>The temperature rating of the input connection cable should higher than 105°C.</li> <li>La température de service nominale du câble d'entrée doit être supérieure à 105 °C.</li> <li>Supplied by SELV source evaluated by UL 61010-1 or 61010-2-201 power supply only.</li> <li>Fourni par la source SELV évaluée uniquement par l'alimentation UL 61010-1 or 61010-2-201.</li> </ul> |  |

#### Note about behavior of power failure relay (DIP switches PWR-1 / PWR-2):

- Relay contact is closed if the device is powered-off.
- Relay contact always is open if the device is powered either by PWR1 or PWR2 and if DIP switches 1 and 2 for power control are set to off.
- Relay contact closes if PWR1 fails and DIP switch 2 is set to ON.
- Relay contact closes if PWR2 fails and DIP switch 1 is set to ON.

## 9. Communication Connections

Switch IE-SW-EL10-8GTPoE-2GESFP is equipped with the following communication interfaces:

8 x 10/100/1000Base-T PoE ports (P.S.E.)

2 x 100/1000BaseSFP slots to be used with SFP Transceivers (mini-GBIC)

### 9.1 10/100/1000Base-T(X) PoE ports (P.S.E)

For communication without PoE sourcing the switch supports auto negotiation speed, Full/Half duplex mode and auto MDI/MDI-X connection, means automatic setting of pinouts for both MDI ports (NIC-type) or MDI-X ports (HUB/Switch-type).

#### Note:

According to IEEE 802.3af/at standards, the PD shall be implemented to be insensitive to the polarity of the power supply and shall be able to operate per MDI mode and MDI-X mode. However, some PDs only support MDI mode or MDI-X mode only.

If the PD only supports PoE MDI mode (V+, V+, V-, V- for pins 1, 2, 3, 6), choose a cross-over Ethernet cable to connect the PD and the switch. If the PD only supports PoE MDI-X mode (V-, V-, V+, V+ for pins 1, 2, 3, 6), choose a straight-through Ethernet cable between the PD and the Switch.

#### Total PoE Budget

For the total power budget, the switch will provide 60 Watts from 12 to 23 VDC input and 120 Watts from 24 to 57 VDC input. The total power budget is the total amount of

reserved PoE power based on the PoE class of the PoE device. If a newly connected PoE device causes the total reserved power to exceed the total power budget, the newly connected PoE device will be denied power.

In case of active PoE sourcing the switch uses the pinout of "Alternative A, MDI mode" of 802.3af/802.3at standards. Please see the details in the following table.

### 10/100/1000Base-T(X) RJ45 Pinouts (P.S.E. Port)

| 8-Pin RJ45 Port | 10/100 Base-T(X) MDI/MDI-X |                                |               | 1000Base-T MDI/MDI-X |                         |            |
|-----------------|----------------------------|--------------------------------|---------------|----------------------|-------------------------|------------|
|                 | Pin No.                    | MDI port                       | MDI-X port    | Pin No.              | MDI port                | MDI-X port |
|                 | 1                          | TD+(transmit) with PoE Power + | RD+(receive)  | 1                    | BI_DA+ with PoE Power + | BI_DB+     |
|                 | 2                          | TD-(transmit) with PoE Power + | RD-(receive)  | 2                    | BI_DA- with PoE Power + | BI_DB-     |
|                 | 3                          | RD+(receive) with PoE Power -  | TD+(transmit) | 3                    | BI_DB+ with PoE Power - | BI_DA+     |
|                 | 4                          | Not used                       | Not used      | 4                    | BI_DC+                  | BI_DD+     |
|                 | 5                          | Not used                       | Not used      | 5                    | BI_DC-                  | BI_DD-     |
|                 | 6                          | RD-(receive) with PoE Power -  | TD-(transmit) | 6                    | BI_DB- with PoE Power - | BI_DA-     |
|                 | 7                          | Not used                       | Not used      | 7                    | BI_DD+                  | BI_DC+     |
|                 | 8                          | Not used                       | Not used      | 8                    | BI_DD-                  | BI_DC-     |

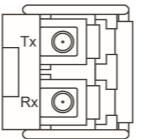

### 9.2 100/1000BaseSFP (mini-GBIC) Fiber Port

The 100/1000BaseSFP type slots, require either a 100BaseSFP or a 1000BaseSFP fiber transceiver (mini-GBIC) to work properly. Depending on the used SFP module the correct transmission speed has to be set via DIP switches 3 and 4. Please only use SFP modules and cables that are compatible with each other to establish an optical connection. Weidmüller provides transceiver models for various distance requirements.

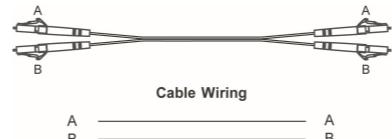

#### LC-Port with separate Transmit and Receive Port:

Remember to connect the Tx (transmit) port of device I to the Rx (receive) port of device II, and the Rx (receive) port of device I to the Tx (transmit) port of device II

LC-Port Pinouts

LC-Port to LC-Port Cable Wiring

## 10. LED Indicators

The front panel of the Ethernet Switch contains several LED indicators. The function of each LED is described in the table below.

| LED              | Color            | Status | Description   |
|------------------|------------------|--------|---|
| PWR1             | Green            | On     | Power is supplied to power input PWR1.                                      |
|                  |                  | Off    | Power is not supplied to power input PWR1.                                  |
| PWR2             | Green            | On     | Power is supplied to power input PWR2.                                      |
|                  |                  | Off    | Power is not supplied to power input PWR2.                                  |
| FAULT            | Amber            | On     | Indicates PWR1 or PWR2 fault (if corresponding DIP switches are set to ON). |
|                  |                  | Off    | If DIP switches are set to OFF or no power failure.                         |
| LNK/ACT          | Green            | On     | Port's link is active.  |
|                  |                  | Off    | Port's link is inactive.  |
| 10/100/<br>1000M | Green /<br>Amber | Green  | Port's speed is 1000 Mbps.  |
|                  |                  | Amber  | Port's speed is 100 Mbps.   |
|                  |                  | Off    | Port's speed is 10 Mbps.  |
| PoE              | Green            | On     | PoE power injection is active.  |
|                  |                  | Off    | PoE power injection is inactive.  |

## 11. Specifications

| Technology                |  |
|---------------------------|--|
| Standards                 | IEEE 802.3 for 10Base-T<br>IEEE 802.3u for 100Base-TX and 100Base-FX<br>IEEE 802.3ab for 1000Base-T<br>IEEE 802.3z for 1000Base-X<br>IEEE 802.3af/at for Power over Ethernet<br>IEEE 802.3x flow control   |
