

Technical change to: socket wrench set SK WSD-S 1,5-10,0

Dear Madam or Sir,

the below listed articles will be supplied in a modified revision. Please pass this product information on to your employees and, if needed, to your customers. All modifications are performed for reasons of product improvements.

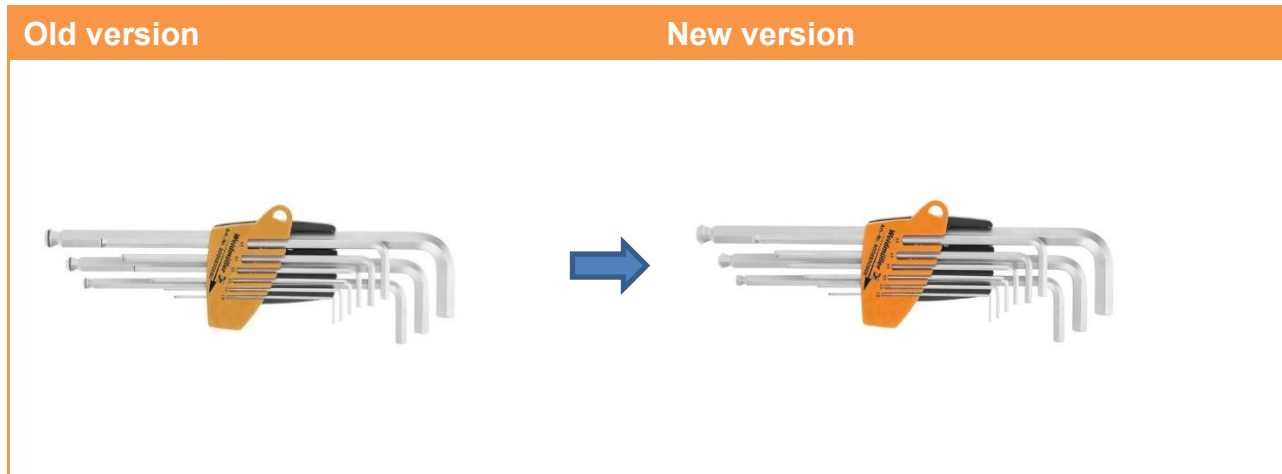

1. Initial situation

The SK WSD-S 1.5-10.0 wrench set currently includes the MagicRing®. The MagicRing® is a holding feature that secures screws using a spring ring without a magnet.

Currently, the pin keys are chrome-plated.

2. Technical change

The MagicRing® will be discontinued. The surface will be a validated galvanized surface with even better corrosion protection.

3. Reason for change

This feature MagicRing® was hardly used and relatively unknown. But it was very expensive.

The surface finish is being changed because Chromium VI is likely to be banned on surfaces and because the new surface offers better corrosion protection.

4. Availability

The switchover will take place as soon as the stock of the previous versions is depleted. This will likely be during Q2/2026.

5. Affected parts

9008850000 – SK WSD-S 1,5-10,0

6. Data

- PCN-PW63xxxx-20260415-00-A DE
- 15.04.2026

We are very sorry for all the inconveniences caused and doing everything to adjust this product change as smooth as possible without big influence on delivery times and general functions.
