

Technical Change

Dear Ladies and Gentlemen,

Product changes serve the continuous product improvement. The articles listed below are supplied in a modified version. Please pass this product information on to your employees and, if necessary, to your customers. All changes are made for product improvement reasons.

1. Initial situation

- The affected articles are two end brackets and accessories for the SAK PA 32 range.
- The plastic material used so far is a PA 66 with flammability class V-2.

2. Technical change

- The plastic material used changes to Wemid. Thus the flammability class UL94 V-0 is achieved. It will be easily identified by a color change from yellow/beige to a dark beige. Please see following pictures, comparing old and new.

3. Reason for change

- The change of the plastic material from PA 66 to Wemid, achieves a higher flammability class, previously V-2 now V-0. This flammability class describes the fire behaviour according to UL94 and is determined according to the following procedure: The test specimen is positioned vertically and ignited at the lower end. With V-2, the previous flammability class, the test specimen is self-extinguishing within 30 seconds at the latest. By changing to Wemid and the new flammability class V-0, the test specimen is now self-extinguishing up to 10 seconds at the latest. The afterglow time is reduced from 60 seconds to 30 seconds.

4. Availability

The change will be realized by 30.06.2020 with available products on stock.

5. Affected parts

The following parts are affected:

0206160000 EWK 1
0199360000 EWK 2

6. Data

The flammability class changes from UL94V-2 to UL94V-0 and the color to a dark beige.

We are very sorry for all the inconveniences caused and doing everything to adjust this product change as smooth as possible without big influence on delivery times and general functions.
