

Enhanced Flexibility in Certified Systems Populated Enclosures with Purge & Pressurisation Systems

In collaboration with Expo Technologies, we are now adding purge systems capability which complements our extensive Ex Certified Enclosure offering and further extends our ability to service applications within the Hazardous area. The purge system allows the installation of noncertified components within the zone 2 area or zone 2 certified components to enter a zone 1 area. This enables us to leverage our entire Weidmüller product portfolio, resulting in increased flexibility.

A Brand of Weidmüller

Your benefits:

- Significantly reduced project lead time by faster and more flexible certification
- Expanded product integration within a certified system
- Leading Quality and Compatibility: Expo and Weidmüller, both industry leaders, guarantee top-tier quality and seamless compatibility.

Our global process industry network

We offer an extensive global network to localise your project

Our combined umbrella certification process enables Weidmüller and Expo to introduce new IECEx and ATEX approved systems that meet demanding application conditions both rapidly and at a highly competitive price. This approach eliminates the historically lengthy delays typically associated with certifying a system through a notified body. Additionally, Weidmüller's extensive global network of Ex assembly locations ensures we can offer a sustainable solution aligned with our goal of reducing our carbon footprint.
