

Relay modules and solid-state relays

Switch to simple – with Klippon® Relay

NEW: TERMSERIES-compact

With the TERMSERIES-compact, Weidmüller has developed a new all-rounder for the Klippon® Relay portfolio. The advantages of the relay in the practical terminal block format are in its clever design. The new addition to the TERMSERIES family is not only variable in use, it's vibration-resistant thanks to its closed design. And with its housing width of only 6.4 mm, the relay can also fit into almost any control cabinet. The integrated PUSH IN connection technology also enables fast and uncomplicated wiring.

Your benefits:

- Relay in terminal block design with only a 6.4mm width
- Industrial connection technology: PUSH IN
- Vibration-proof relays

Klippon® Relay

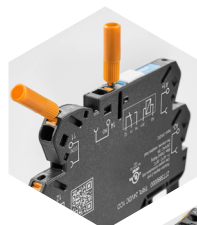

TERMSERIES-compact

Universal
Usable in any application

Identifiable
Pluggable standard
markers usable

Uncomplicated
Integrated test taps at
each connection

Data support
QR-Code goes directly
to the data sheet
