

Technical change of the standard series of Weidmüller Industry lights

Dear Madam or Sir,

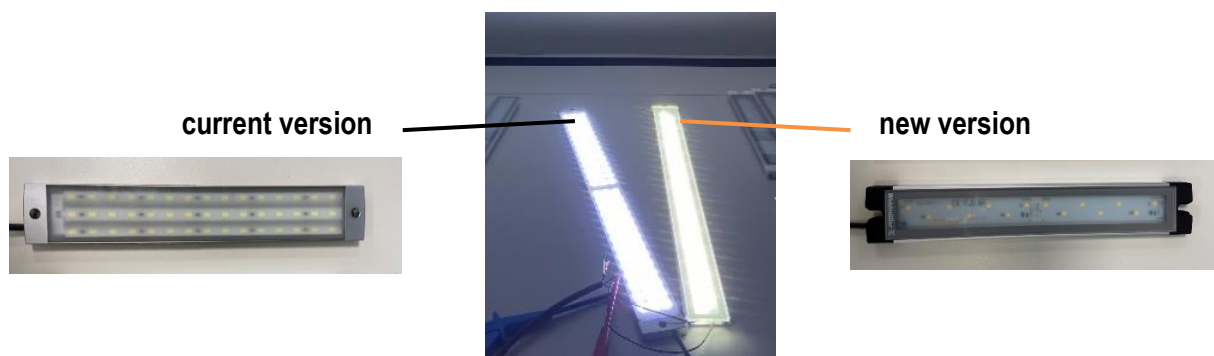

the products listed below are subject to a product change and will be supplied in a modified revision. Please pass this product information on to your employees and, if needed, to your customers. All modifications mentioned have been made to support our ongoing commitment to continual improvement and ongoing product development.

1. Initial situation

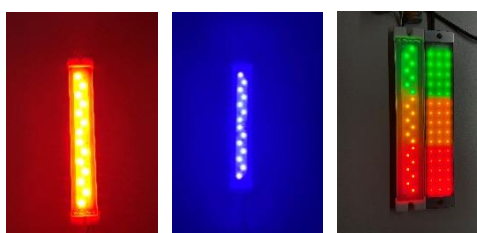

The standard series of Weidmüller Industry lights currently has a PUR encapsulation as the LED cover and a three-row structure of LED dots on the circuit board. Two through-holes with a diameter of 6,5mm are provided for mounting the lights with an M5 screw or an M6 fine-thread screw.

2. Technical change

In future, the LEDs will be covered with safety glass (ESG). The LEDs will be positioned in two rows on the circuit board. The adjustment of the positioning is not visually noticeable when lit, as the light values such as lux and lumen are identical. The power values have only slight deviations, but these do not require a change of existing power supply units. The color temperature may vary. Furthermore, two slotted holes with a diameter of 5,5mm (before 6,5mm) allow the luminaire to be mounted more easily. The IP67 protection class and the lighting angle of 120° are retained. Below are pictures of the 6500K version for comparison:

Representation of the new color variants:

3. Reason for change

The adjustment is necessary due to current market requirements. The production setup will also be adapted, which will result in improved delivery times.

4. Availability

The changeover of the standard series of the Weidmüller Industry lighting portfolio will take place from the end of Q2 / beginning of Q3. Mixed deliveries may occur due to existing stock.

5. Affected parts

The adjustment is made using the existing/known article number:
